Now Upgrade any* Fan-Tastic Vent® or Create-A-Breeze® to a Model 6600! Bring the Outside in...Instantly®

Imlay City, MI - Fan-Tastic Vent Corporation is proud to announce their K6600R/417 Upgrade Kit. You can take any* Fan-Tastic Vent® or Create-A-Breeze® and upgrade it to a Model K6600R/417. The installation involves a few easy steps and never disturbs the factory waterproof roof seal! Once installed, control fresh air from the comfort of your easy chair.

The Fan-Tastic Vent Model K6600R/417 has all the best features available from the #1 selling manufacturer of air-exchange systems in the RV Industry. Automatic or Manual Variable Speed Modes, Rain Sensor and Reverse Airflow. Our 12 Volt system moves air at a rate over 900cfm using less than 2 amps and operates through a wireless radio frequency (RF) remote with wall cradle. The Patent Pending electronics assigns a specific remote for one fan and is programmable to operate multiple fans together. Now there is no longer a need to run wires down the wall or use a chair to reach the ceiling fan!

The wireless RF remote allows the user to open/close the dome as well as choose one of fourteen manually selected speeds for constant airflow or an automatic speed setting for ambient comfort. "The trend to higher ceilings along with the demand for upscale features in coaches continues to grow, thereby increasing customer desire for a remote or wall control and more options" says Larry Milks, Vice-President. He adds, "Our K6600R/417 Upgrade Kit answers those demands and is consistent with our belief that the users of RV's are the intelligent body prudent businesses must adhere to."

*Clamp series fans require special order assembly.
