New FAN-TASTIC Vent Product Goes Hand in Hand With End Users

Imlay City, MI - Fan-Tastic Vent Corporation started production of model 6600 on May 22, 2006. The newest in air exchange systems for the RV market includes a hand held radio frequency remote. This innovative addition to the Fan-Tastic Vent family of high efficient vent fans was introduced at the December 2005 RVIA show in Louisville, Kentucky. The model 6600 combined with the wireless radio frequency remote answers consumer needs for air flow from anywhere in the coach.

The Fan-Tastic Vent 6600 has all the best features from the #1 selling air exchanger. Automatic or Manual Mode Variable Speeds, Rain Sensor, Reverse, 12 volt low amp draw, fits in the standard roof top opening and includes a wireless radio frequency remote with wall cradle. The Patent Pending Radio Frequency portion assigns a specific remote for one specific vent. Similar to garage door opener operation, each Fan-Tastic Vent model 6600 wireless radio frequency remote operates one and only one 6600 model vent. The standard two-wire hookup benefits anyone from OEM to aftermarket buyers. No need to run wires down the wall or bring a chair to reach the ceiling.

The wireless radio frequency remote will allow the user to choose one of fourteen manually selected speeds for a constant airflow or an automatic speed setting for ambient comfort "The trend to higher ceilings in coaches continues to grow in popularity causing increased customer desire for remote or wall control," says Larry Milks, Operations Director. "This follows Steve's philosophy to listen to and take care of the customer," he adds referring to the recent passing of Steve Milks, the inventor of the Fantastic Vent Air Exchange System.

Leading the Recreational Vehicle market for all 12-volt air moving systems, Fantastic Vent is set to sell their 2,000,000th fan in mid 2006. All models of Fan-Tastic Vent are available through Distributors or any RV Dealer worldwide.
